```

Specific Syntax for Different Quiz Types

Single choice

Which of the following is not a position in football/soccer?

- [ ] Goal defense
- [x] Left midfielder
- [ ] Right fullback
- [ ] Centre back

Multiple Choice

Which of the following is not a position in football/soccer?

- [ ] Goal defense
- [x] Left midfielder
- [x] Right fullback
- [ ] Centre back

Correct Order

Put the planets in order from the Sun:

(1.) Mercury

(2.) Venus

(3.) Earth

(4.) Mars

Multiple Drop-Down

```
The color of the sky is
{{red|blue|green|yellow}}.
```

The first option specified is the right answer.

Matching Question

```
Match the animals with
their sound!

- {A1|B1}

- {A2|B2}

…

- {An|Bn}
```

True or False Question

```
Penguins can fly.
- [x] True
- [ ] False
```

Picture Quiz

```
Identify the object shown below:
![Apple logo](/apple_logo.png)
- [ ] Microsoft
- [x] Apple
- [ ] Google
- [ ] Meta
```

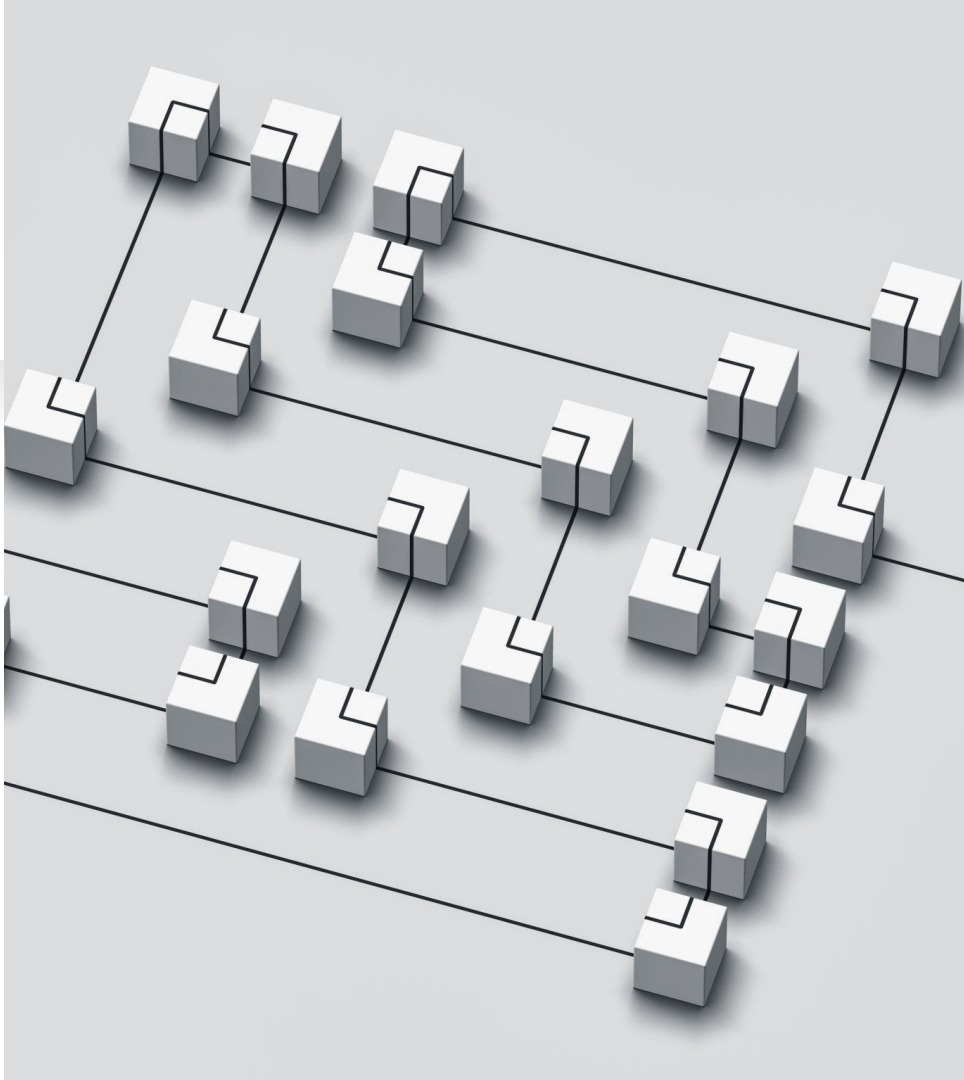
EXAMPLE FOR WHOLE VERSION

```
@START
@title: My Quiz
@description: This is a description which can contain any text.
@time_limit: 600
@shuffle_questions: true
@shuffle_answers: true
@author: John Doe
---
Put the planets in order from the Sun:
(1.) Mercury
(2.) Venus
(3.) Earth
(4.) Mars
@time_limit: 10
---
Which of the following is not a position in football/soccer?
- [ ] Goal defense
- [x] Left midfielder
- [ ] Right fullback
- [ ] Centre back
@time_limit: 15
@shuffle_answers: true
---
next questions
---
@END
```

Multiple quizzes and markdown files

It is possible to have multiple quizzes in a markdown file.

Also, we can have multiple markdown files connected, so that the quizzes in one file will be shown when opening the other file. For this, we have the *@include: file=additional_quizzes.md, id=id1, id2, …* syntax.



Example for including quizzes from another file

File 1: index.md

```
Lorem ipsum …
Some random markdown text…
@START
---
question 1
---
question n
---
@END
Lorem ipsum …
Some more random markdown text…
@include: quizzes.md, 1
Lorem ipsum …
Some even more random markdown text…
@include: file=quizzes.md, id=easy_version
```

File 2: quizzes.md

```
@START
@id: 1
---
question 1
---
question n
---
@END

@START
id: easy_version
---
question 1
---
@END
```

Explanation (and referencing) after the questions

You can add explanations to each quiz question using a simple syntax. This explanation will be shown to the students during feedback.
To include an explanation, write:

```
@explanation: Actual markdown text for the explanation. This is an explanation.
```

Example for Explanation

```
@START
---
Put the planets in order from the Sun:
(1.) Mercury
(2.) Venus
(3.) Earth
(4.) Mars
@explnanation: This is the explanation for this question. La la la.
---
```

```
Which of the following is not a position in football/soccer?
- [ ] Goal defense
- [x] Left midfielder
- [ ] Right fullback
- [ ] Centre back
@explanation:
This is another explanation. Bla bla.
---
next questions
---
@END
```

Referencing Lecture Material

- Questions can link directly to lecture notes
- Using standard Markdown links
- Students can jump directly to the relevant explanation.

An anchor id is needed in the lecture material for a part that we want to reference:

Lecture material:

```
<a id="planet-definition"></a>
The planets orbit the Sun in a fixed order.
```

Quiz explanation:

```
@explanation:
See list of the planets [here](#planet-definition)
```

Referencing Lecture Material

Linking Within the Same File:

Lecture material:

Order of the planets

Quiz explanations:

@explanation:

See [Order of the planets](#order-of-the-planets)

Linking to Another File

Lecture file: lecture_notes.md

##Football positions

Quiz explanations:

@explanation:

See [Football Positions](lecture_notes.md#football-positions)

- **Headings** automatically create anchors
- Anchors are lowercase and dash-separated

Referencing Lecture Material

Linking to Non-Heading Content:

If you want to link to a **specific paragraph** or sentence, you must add an *explicit anchor* using inline HTML:

```
<a id="planet-definition"></a>
```

```
The planets orbit the Sun in a fixed order.
```

Then link to it:

@explanation: `[Planet definition](#planet-definition)`

Referencing Lecture Material

Reference-Style Links:

Useful for longer explanations or repeated links.

```
@explanation:

The correct order is explained here [details][planets].

[planets]: lecture_notes.md#order-of-the-planets
```

Example for Reference

Lecture material: lecture_notes.md

```
# Astronomy Basics

## Order of the Planets
The planets are ordered by their distance from the Sun.

<a id="planet-definition"></a>
A planet is a celestial body that orbits a star and clears its
orbit.
```

(see next slide too)

Example for Reference

Quiz file: quiz.md

```
@START
---
Put the planets in order from the Sun:
(1.) Mercury (2.) Venus (3.) Earth (4.) Mars
@explanation:
See [Order of the
Planets](lecture_notes.md#order-of-the-planets)
.
---
What is a planet?
- [x] A body that orbits a star and clears its
orbit
- [ ] Any object in space
- [ ] A moon
@explanation:
See the formal definition here:
[Planet
definition](lecture_notes.md#planet-definition).
--
Which planet is closest to the Sun?
- [x] Mercury
- [ ] Venus
- [ ] Earth
- [ ] Mars
@explanation:
The answer is explained in the lecture notes
[here][closest].

[closest]: lecture_notes.md#order-of-the-planets
---
@END
```

List of @-*keywords* that define different behaviours of the quiz

Structure & Identification

Defining the boundaries and modularity of the quiz

@START / @END

Marks the beginning and end of the interactive quiz block.

Signals the parser to switch from standard Markdown to Quiz mode.

@id: <unique_name>

Assigns a unique identifier to a quiz instance.

Essential for referencing specific quizzes in complex files.

@include: file=<file_path>, id=<quiz_id_1>, <quiz_id_2>

Imports a specific quiz from an external file (that quiz specified by parameter *id*)

Allows for reusability and cleaner course page.

E.g.: @include: file=quiz.md, id=easy, hard

The order of the parameters is interchangeable.

Global Configuration: Visuals & Timing

Controlling appearance and time constraints

@title: <text> & @description: <text>

Sets the main header and introductory instructions.

@layout: <list|book>

List: All questions visible vertically.

Book: One question per slide.

@time_limit: <seconds>

Sets a countdown timer for completing the quiz in seconds.

Global Configuration: Logic & Behavior

Defining how the quiz interacts with the student

@shuffle_questions: <true|false>

Randomizes question order to prevent memorization.

@feedback_mode: <immediate|end>

Immediate: Shows results after every question.

End: Results revealed only upon final submission.

@author: <author_name>

Marks the author of the quiz.

Global Configuration: Behavior

Defining how the quiz interacts with the student

@allow_back: <true/false>

Controls backward navigation during the quiz.

Global Configuration: Requirements

Defining some requirements for the quiz taker

@required_score: <number>

Sets a minimum score threshold required to "pass" the quiz.

Question Specifics

Adding depth and learning aids to individual questions

@explanation: <text>

Provides context for the correct answer during feedback.

Explains why an answer is right or wrong.
